

IAS Computer Simulation:

Header File: Object.h

Class name: Object

Namespace: osn

Object representation using virtual and pure virtual methods

To be overwritten as returned string in the other header files, main drive if necessary.

Methods:

Virtual destructor:

~ virtual Object() {}

Pure virtual toString method():

Returns string representation of object. Converts object to string representation.

Virtual string toString() const = 0;

Overload output stream operator<<(ostream& os, const Object& obj) to allow printing:

Friend ostream& operator<<(ostream& os, const Object& obj)
